No on-site programming
- **Secure**
32 Security Codes

Light Symphony Solution

The keyfobs provide convenient control over any of Light Symphony's wireless lighting controllers. Available in two options and pre-programmed to control either Areas 1-4 or Areas 1-2 with whole-garden (master) on/off.

Impressive, 350 metres (line-of-sight) range makes it reliable through concrete walls, out-buildings etc. and can be boosted to 1000m when used with a base-station or other repeater.

32 preset security-codes prevent interference and allow programming away from site.

Colour LED lighting control too, by holding down any key to cycle through available colours.

Any number of keyfobs may be used, together with wireless switches, or full size remotes on the same system.
